```
graph LR; A[controllers\rest\Information RestController\create_item _permissions_check] --> D[controllers\rest\Information RestController\get_items _permissions_check]; B[controllers\rest\Information RestController\delete_item _permissions_check] --> D; C[controllers\rest\Information RestController\get_item _permissions_check] --> D; E[controllers\rest\Information RestController\update_item _permissions_check] --> D;
```

The diagram illustrates a central target box, 'controllers\rest\Information RestController\get_items _permissions_check', which is the destination for four separate source boxes. The source boxes are arranged vertically on the left and represent different REST controller actions: 'create_item', 'delete_item', 'get_item', and 'update_item'. Each source box has a blue arrow pointing towards the central target box, indicating a common dependency or a shared permission check for the 'get_items' endpoint.
